Overview

An event management system is a software that allows users to book for an event from start to finish on a single platform.

It provides various features such as event registration, booking management, attendee management, and customizable event pages.

User Module

- There are two types of users: guest user, registered user
- Guest user can only see general information like event details, contact us.
- Registered user can register for an event, manage their bookings, update their profile, and change password.

Admin Module

Dashboard: In this tab admin can see details of events, venues and customers.

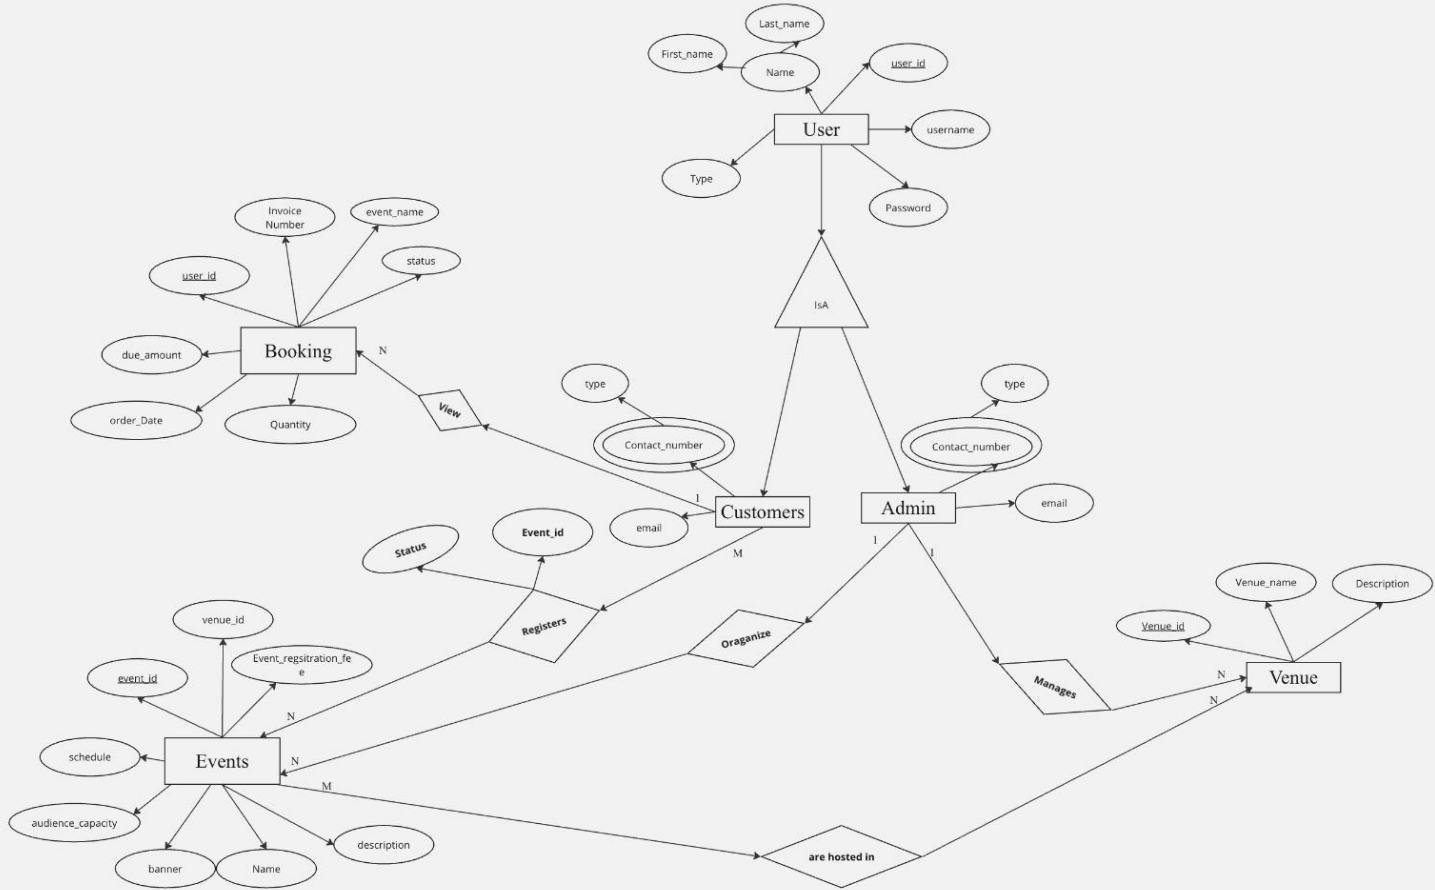

Events: In this tab admin can add details of a new event, view and modify the details of current events.

Venues: In this tab admin can add details of a new venue, view and modify the details of current venues.

View payments: In this tab admin can see the details of payments.

Users: In this tab admin can view and modify the details of existing users.

ER Diagram

Challenges

- Designing user-friendly application
- Connecting the front-end interface with the back-end functionality.
- Providing authentication for an individual user to register for an event.

Future Scope

Enhance Event Details:

- Add more detailed time and date options for events to improve scheduling and clarity.

Payment Methods:

- Work on integrating more payment methods to enhance user convenience and security.
